

What I've Been Building

Chulwoo Ahn | Elbaph First Meetup

4 Projects

01 **Korean Date Guide**
AI date course planner

02 **Draft**
AI English writing coach

03 **YouTube / Instagram**
Content & social media

04 **Elbaph Bot**
AI Slack bot for the community

01 Korean Date Guide

AI-powered date course planner for Korean couples
<https://korean-date-guide.lovable.app/>

What It Does

Plan a full date course in under 3 minutes

Input: location, time, activities, mood, budget

AI generates restaurant/cafe/activity recommendations

Build course with drag-and-drop, real-time ETAs

Share via link, image card, or KakaoTalk

Target

Korean couples in their 20s-30s

Mobile-first, Korean UI

User Flow

- 1 Location, date, time, duration
- 2 Pick activities (food, cafe, movie...)
- 3 Set mood & budget
- 4 AI recommends places on map
- 5 Build & reorder your course
- 6 Share with your partner

Tech Stack

Vite + React 18 + TypeScript + Tailwind + shadcn/ui

Gemini AI (via Supabase Edge Functions)

Kakao Maps SDK + TMAP routing + Google Places

Supabase (auth, DB, edge functions)

02 Draft — AI English Writing Coach

draft-ai.vercel.app

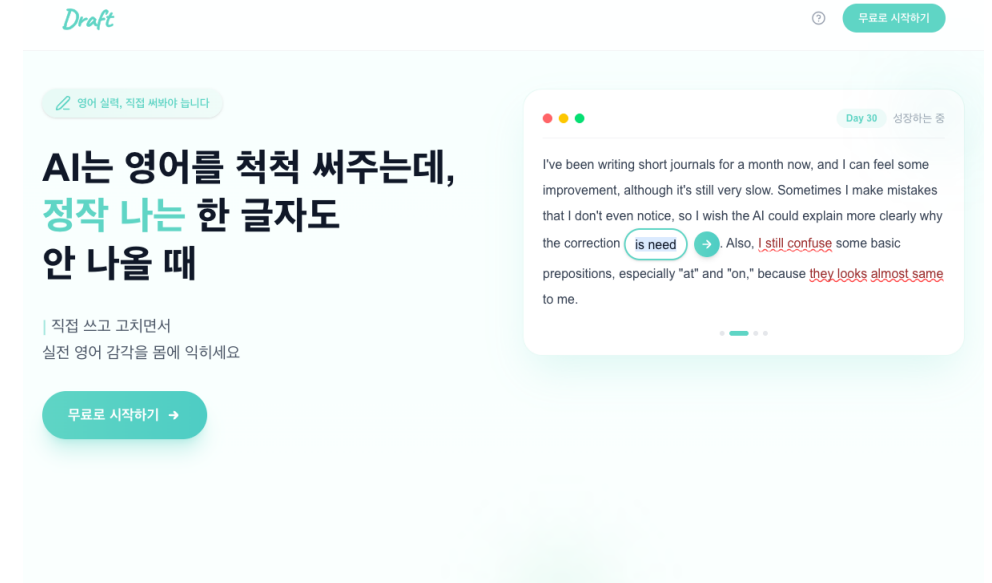

Problem: AI writes English for you, but YOUR skills never improve

Solution: Write yourself, get AI corrections, actively rewrite to internalize

Tagline: "Write, make mistakes, fix them"

Target: Korean users — study abroad students, foreign company workers

Status: Live in production

02 How Draft Works

1 Pick a Topic

Daily prompts or free writing

2 Write Freely

No hints, no corrections — just write

3 Guided Rewrite

Fix grammar & structure errors yourself

4 Native Polish

Rewrite toward natural, native phrasing

02 Draft — Traction in 3 Days

Soft launch: Feb 24-27, 2026 | ₩10,000 marketing spend

3,218

Page views

61

Signups (Kakao OAuth)

Writing sessions

191

AI corrections generated

88.6%

Session completion rate

0%

Checkout → Paid
conversion

185

Peak unique visitors/day

\$0

Customer acquisition cost

2 paying subscribers (all churned) — validated willingness to pay

Post-draft-submit retention: 80-100% — AI correction is the magic moment

02 Draft — Funnel & Key Insights

Conversion Funnel

Page views	3,218	100%
CTA clicks	118	3.7%
Signups	61	1.9%
Selected topic	15	23.4%
Submitted draft	5	7.8%
Completed flow	4	6.3%
Subscribed	4	6.6% of signups

What Worked

88.6% session completion — product flow works
50% checkout conversion — willingness to pay
80-100% post-draft retention — AI corrections keep users
#1 error: articles (21%) — clear problem validation

What Didn't

76.6% drop at topic selection — choice paralysis
66.7% drop at draft submit — blank page problem
1.8% week-1 retention — no habit loop yet
All 4 paying users churned

Lesson: The product works once users engage. The challenge is activation and retention.

04 Elbaph Bot — Loki

AI-powered Slack bot for the Elbaph community

Daily News Briefing

5 topics: AI, Robotics, BCI, Medtech, Korea Startups

5 parallel agents fetch curated sources + web

#news → source thread → #lounge cross-post

Archived daily as markdown

Tag @Loki for Answers

Gemini Flash — fast answers via Google Search

Manus API — deep research across 10+ sources

Smart routing by question complexity

Tech Stack

Runtime	Next.js on Vercel (serverless)
Slack	Events API + signature verification
AI Triage	Gemini 3 Flash Preview (free)
Deep Research	Manus API (Pro subscription)
State	Upstash Redis
Async	Manus webhook callback

04 Loki — Learnings & Gotchas

Vercel Serverless

after() does NOT run on Vercel

No shared memory between invocations

Lazy-init API clients for build compatibility

Slack API

bold not **bold** — custom converter needed

Trailing whitespace in tokens breaks auth

>95% failure in 60 min disables events

Manus API

Results in attachment files, not output_text

Auth: API_KEY header (not Bearer)

GET /tasks/{id} omits original prompt

Key Takeaway

Serverless + multiple external APIs = edge cases everywhere. Redis is essential for state. Every API has its own quirks.
